

Welcome to Penrith, Australia's new "Third World welcome zone"

In June 2008 Penrith council proudly declared the Penrith LGA would become a "refugee welcome zone".

In 2010 the council is building upon this by their decision to allow household rubbish to fester in 'slop buckets' and overfilled bins by only collecting rubbish twice a month. It appears Penrith council is determined to turn Penrith into a "Third World welcome zone".

On his web page, Mayor Kevin Crameri states that he

...is particularly committed to good communication with the community and making the City as attractive as possible as a place to live, work, visit and invest in.

Has Mayor Crameri walked around 'his' city lately? Has he observed the unsightly piles of refuse on the curbside or breathed in the ungodly stench of maggot infested rubbish? The decision by Penrith council to halve rubbish collection not only means it has effectively doubled its rates, but also poses an dangerous health risk for Penrith residents and their families.

Residents are already reporting a visible increase in pests such as blowflies and rats. These pests are responsible for the spread of diseases, such as leptospirosis, hantavirus disease, plague, rabies, salmonella, shigella, campylobacter, and toxoplasma.

A study reported in the *African Journal of Biotechnology* on the spread of Salmonella by common household flies in Nigeria found that poor waste management can increase the risk of the spread of such disease and concluded that

Good environmental sanitation practices and measures must be adopted to control house flies

Now if a Third World nation like Nigeria can recognise the importance of safe waste management, why can't Penrith council?

Since rubbish gets removed twice a week from the Penrith Council itself, perhaps residents can leave the excess waste on the council's front doorstep?! Maybe then they will start 'communicating'!

The APP is campaigning for a proper rubbish collection policy in Penrith. Contact us for more leaflets. Save your area. **It's time to stop the rot!**
